

Workshop Safety

When using machines in the basement and on the 2nd floor in building 1523, machines may only be used if the user has a **degree in metal** or has passed a week workshop course with diplomas.

There should be at least two people present.

When using machines outside normal working hours, this must only take place following prior agreement with the person responsible for the workshop.

There should be at least two persons present with at least one person with a **workshop certificate**.

For students' use of the workshops: the students must have taken out **liability insurance and, if necessary, a full-time accident insurance**, as the state has not taken out insurance for the students' work in laboratories and workshops.
